ABSTRACTED-PUB-NO: US 5832497A
BASIC-ABSTRACT:

The system includes database (105) of personal information which is stored in
electronically readable memory. Another database (103) of position information is
stored in electronically readable memory. The database (103) is the job database
containing several job records with search key fields. The database (105) is a
resume database comprised by several records containing information suitable for
employment applications. A communication port (102) transmits and receives data and
instructions in the form of electrical signals to and from the remote computers.

A database manager creates and revise records of the databases connected to the
memory, in response to remote computer. An iterative database query engine (106) is
connected to the memory and is configured to permit an initial search and one
subsequent search. The subsequent search is performed on results of the initial
search. The iterative database query engine includes searching unit for searching
on several search key fields of database for satisfying one or more conditions. A
reporting unit for reporting all variables in search key fields of record for
satisfying one or more conditions, is provided. A processing controller (101) is
connected to the database manager, iterative database query engine and the
communication port. A relating unit relates the record of the database (105) to

record of <u>database</u> (103). An accounting system (107) is connected to the processing controller.

USE - For posting job advertisement and managing application and submission of <u>resumes</u>, application letter and other relevant information.

ADVANTAGE - Facilitates creation of <u>resume</u> record and designation of <u>resume</u> record for accessible <u>resume</u> base or selected job record and permits <u>query of resume</u> base to identify recruitment candidates for job positions. Eases interaction and permits rapid response.
